

Sustainable mining of the future

The changing investment landscape

We are delighted to invite you to our final Africa Breakfast Briefing for 2018, taking place on **Wednesday 28 November**. To coincide with the 2018 Mines and Money London conference, this seminar will explore the challenges and opportunities around sustainable mining of the future and the changing investment landscape.

As commodity prices remain modest, and with increasing globalisation and localisation, we want to explore how sustainable development forms part of a business' social mission. However, this changing landscape brings risks as well as rewards.

Environmental, social, and governance considerations are increasingly critical to a projects success, but how are mining companies overcoming the challenge of reducing footprint whilst continuing to meet global commodity demands? With traditional investment drying up, where will the next well of funding come from?

Join us and our panel of guest speakers as we discuss new trends in global mining and explore why the importance of sustainability should not be underestimated.
